Energy to Care: Data Use Policy

Participation in ASHE's Energy to Care program is free for health care organizations; however, organizations applying for an Energy to Care award must have an ASHE member on staff. Program participants must first create an ENERGY STAR Portfolio Manager account. The process of creating an account involves submitting demographic information and utility data, which includes energy and water billing data, facility characteristics, and contact information. The Portfolio Manager account will then be "linked" with the Lucid Design Group's BuildingOS dashboard, which is also referred to as the Energy to Care dashboard. This "linkage" carries the data from Portfolio Manager to the dashboard.

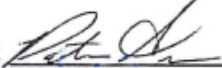

The privacy of your data is a top priority for ASHE. To ensure your information is kept private, ASHE follows a data use policy and also requires any program partners that have access to the data to adhere to this policy. Organizations that will have access to the data include:

- American Society of Healthcare Engineering (ASHE)
- Lucid Design Group, the creator of the dashboard software

The following data use requirements and restrictions apply to all the aforementioned entities:

- All collected individual facility data shall remain confidential and may not be distributed or shared with any other entity unless express written consent is received from the participating facility.
- Aggregate data for groups of facilities, regions, or competitions may be used for analysis and reporting of general performance; aggregate data will not identify individual facilities and/or organizations. Aggregate data will not be reported if there are less than five (5) facilities within a particular segment.
