

How Energy to Care can help your health care organization

Health care organizations are working to save money, direct more resources toward patient care, help the environment, and be recognized as a responsible corporate energy citizen. The free Energy to Care benchmarking and awards program can help your organization meet these goals.

The Energy to Care program is offered by one of the American Hospital Association's personal membership groups, the American Society for Healthcare Engineering (ASHE). The goal of Energy to Care is to reduce energy costs so more resources go back into patient care.

Energy to Care provides important, free benefits:

- A free online confidential dashboard to benchmark and track results
- A help desk for questions not only as you join Energy to Care, but also when questions arise at any time in the energy benchmarking and tracking process
- Valuable guides, tools, research materials, and member case studies
- Awards to recognize energy efficiency progress

More than 2,000 facilities are currently participating in Energy to Care, and facility managers are [saving their hospitals valuable resources](#). Now it's your turn. Encourage your facility management team to participate in this national initiative.

For more information on ways senior leaders can support efficiency efforts, download a free copy of the Hospitals in Pursuit of Excellence guide, [Environmental Sustainability in Hospitals: The Value of Efficiency](#).
